

- Do not place items directly in front of the sensor as this may affect the function.
- Once the LED light is activated it will remain on for approximately 15 seconds
- 4 AAA batteries are required and are not included
- The LED light may not be able to turn off if the battery is too low. In that case, please change the battery.

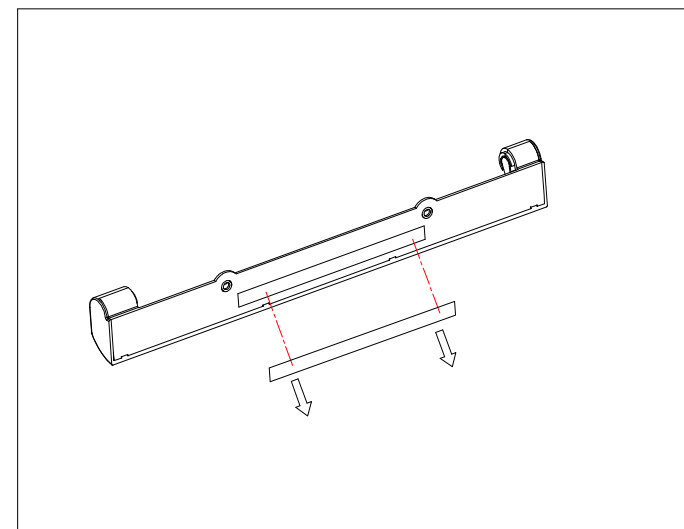

Parts Supplied:

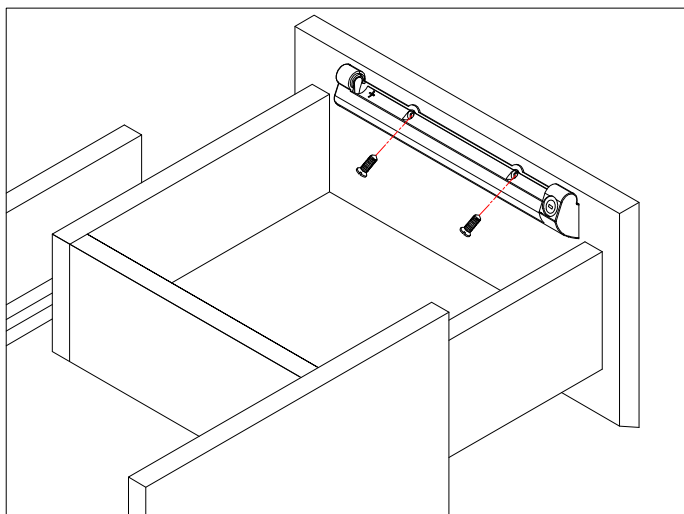

1: The above diagram shows the recommended installation position for drawer units and cabinets.

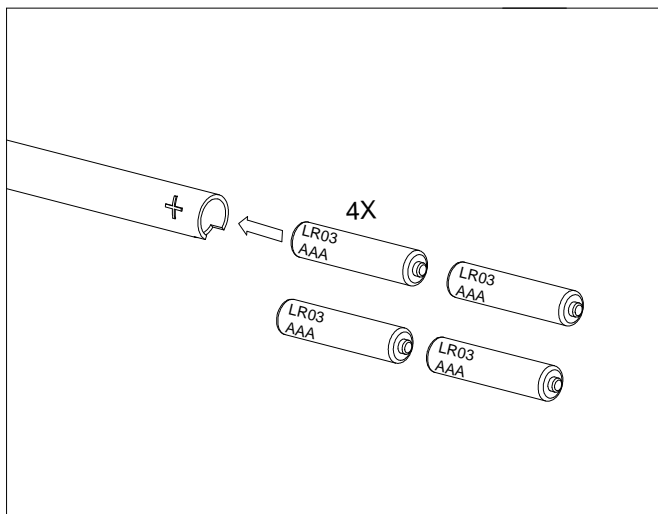

2: Take off the battery holder.

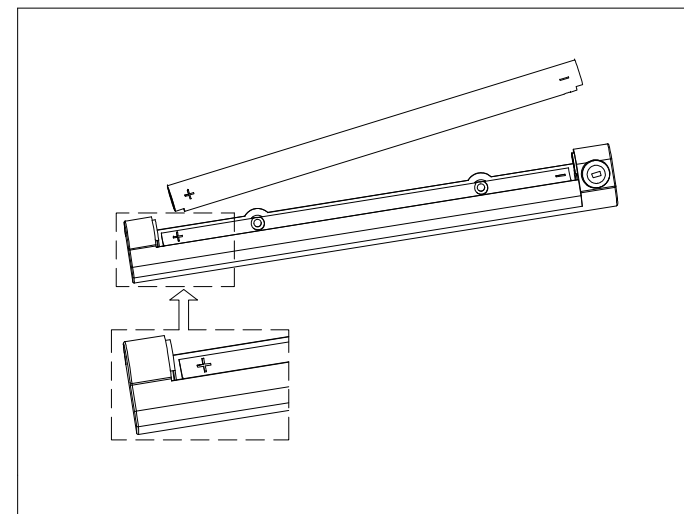

3: Take off the the anti-adhesive tape and press into the required position.

4: Fix the light to the cabinet by screws.

5: Insert 4xAAA batteries into the battery holder.

6: Click the battery holder onto the LED light body.
Ensure the +/- signs are consistent with the light body.
