All of our Chalfont furniture pieces have a high quality paint finish and are prepared with 3 layers of primer featuring UV stabilisation to minimise colour fading from exposure to sunlight. Followed by 2 layers of top coat for a glorious depth of colour.

Made from materials specifically selected to withstand the rigours of life in the bathroom where temperature and humidity can vary widely.

BRASSWARE

Burlington brassware can be customised with a choice of tap heads; Claremont and Kensington and a choice of finishes.

We supply every tap with two Neoperl devices: A flow straightener, which is for use with low water pressures and an aerator, which is for use with high water pressures.

KEY FEATURES

Burlington brassware products have a range of key features across basin and bath taps, shown below.

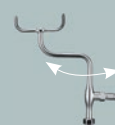

Swivelling Spouts

All our bath fillers and bath shower mixer spouts swivel - so you don't have the spout in your way when you shower.

Angled Mixers

All our bath shower mixers are available in an 'angled' version.

S Adjuster

The S adjuster allows the telephone handset to be positioned over the bath. The bath shower mixer can be installed with or without the 'S adjuster'.

Bridge Mixers

Our bridge basin mixer has a swivelling spout and allows you to have mixed hot & cold water, whilst using a two taphole configuration.

SHOWERING

Our range of showers provide extensive options to create a perfect showering solution. Whether you prefer showering over a bath or within an enclosure, our range of thermostatic valves offer safe and controllable showering for the entire family. Partner with a wide range of enclosure styles with corresponding trays.

KEY FEATURES

All our showers come as standard with the below key features.

One Way Water

Our non-return valves ensure the flow of water in only one direction, ensuring heating efficiency, preventing siphonage of contaminated water and keeping your shower cartridge in excellent condition for longer.

Airburst Shower Heads

By combining air and water, the pressure inside the shower head is increased. The power of a traditional shower head with up to 33% water saved.

Thermostatic Showering

Within the valve there is an automatic adjuster which maintains temperature by adjusting the flow of each supply. This is useful in guarding against the possibility of scalding. If for instance, someone flushes a WC whilst you are showering, the flow of hot water will immediately be closed down to compensate for the reduced cold water flow.

STYLE OPTIONS

Our showers are available with concealed or exposed valves.

Concealed

A concealed shower valve creates a clean finish as the valve is hidden behind the wall.

Exposed

An exposed shower valve is fitted onto the wall and has a more traditional feel.
